

Create a basic domain model for an **e-commerce platform**. This exercise will guide you through defining the core domain, identifying key entities, and establishing relationships between them.

Define the Core Domain and Support Domains:

- Identify the core domain of the **e-commerce platform**.
- List at least three support domains that interact with the core domain.

Identify Key Domain Entities:

- list at least three entities that would be part of the core domain.
- For each entity, provide a brief description of its purpose within the domain.

Describe Relationships Between Entities:

- Identify and describe at least two relationships between the entities you've listed.
- Specify whether these relationships are one-to-one, one-to-many, or many-to-many.
